PROFESSIONAL SUMMARY

Aspiring Data Analyst and Microsoft Certified Fabric Analytics Engineer (DP-600) who turns raw, multi-table data into decisions using SQL, Python, Excel and Power BI. Built an end-to-end procurement analytics solution using Excel, Python, MySQL and Power BI, covering ~₹1B in spend, that exposed ~64% on-time delivery and road transport as the main source of delays. Analyzed 500+ SaaS accounts to quantify 22% churn and identify revenue at risk by product segment. Experienced in data modeling, ETL, advanced SQL (CTEs, subqueries) and KPI dashboards for stakeholders. Machine Learning internship experience with Scikit-Learn classification and regression models. Seeking an Associate Analyst role to deliver data-driven insights for clients.

EDUCATION

Sri Ramakrishna Engineering College **2023-2027**

B.E. Robotics and Automation | CGPA – 9.07

Amrita Vidyalayam **2023**

Higher Secondary Education (Class XII) | 85.2%

INTERNSHIP

Machine Learning Intern | Techvolt Software **Coimbatore**

- Built supervised ML models in Python on 4 datasets (house prices, diabetes, Titanic, medical), using Scikit-Learn for classification and regression.
- Cleaned and preprocessed data: handled missing values (e.g., 5,502 in housing data), encoded categories and applied feature scaling.
- Predicted Bengaluru house prices (13,320 listings) by comparing 3 algorithms; Random Forest performed best (R^2 0.81).
- Tuned KNN (best K = 12) for diabetes prediction (77% accuracy) and trained an SVM on Titanic data (76% accuracy, 81% precision).
- Performed EDA with Pandas, Matplotlib and Seaborn on 5 datasets (Zomato, YouTube, shopping, books, weather) to extract business insights.

IoT Intern | Apex I Sys **Coimbatore**

- Gained hands-on experience in IoT systems, sensor interfacing, and embedded programming.
- Worked with microcontrollers and hardware components for automation applications.
- Implemented real-time data acquisition and device communication for IoT applications.

SKILLS

Programming:	C, Python, SQL (MySQL)
Tools & Platforms:	Excel, Power BI, Git, GitHub, VS Code, Jupyter Notebook, MySQL Workbench
Machine Learning:	Supervised Learning, Unsupervised Learning, Data Preprocessing, Feature Engineering, Model Evaluation
Data Analytics:	Data Cleaning, Exploratory Data Analysis (EDA), Data Visualization, Statistical Analysis, Data Wrangling, Data Validation, Business Insights, Data Storytelling
Data Platforms & BI:	Microsoft Fabric, Power Query, DAX, ETL, Data Modeling, KPI Dashboards, Stakeholder Reporting
Python Libraries:	Pandas, NumPy, Matplotlib, Seaborn, Scikit-Learn
Soft Skills:	Problem Solving, Critical Thinking, Team Collaboration, Communication
Languages:	English, Tamil, Telugu

PROJECTS

Supply Chain Management & Logistics Analysis
Tech Stack: Excel, Python, MySQL, Power BI

- Cleaned an 11-worksheet procurement dataset in Excel and loaded it into MySQL using Python to analyze procurement, supplier, logistics, and delivery performance.
- Developed 19 SQL queries using multi-table JOINs, aggregations, subqueries, CASE logic, and date functions to answer 11 business questions on spend vs target, price variance, supplier risk, delivery reliability, freight cost, rejections, and contract compliance.
- Built a 3-page Power BI dashboard tracking ₹991.94M procurement spend across 480 purchase orders and 48 suppliers, with KPIs for purchase-price variance (1.12%), carrier on-time delivery vs SLA, freight cost, andtransit time.
- Found overall on-time delivery of 63.71%, declining from 69.0% in January to 58.5% in October, with carrier performance ranging from 57.89% (GATI Industrial) to 72.34% (Delhivery B2B).
- Identified road as the source of 302 of 487 delayed shipments and air as 51.54% of the ₹24.13M freight cost, supporting carrier SLA reviews and freight-mode cost decisions.

SaaS Churn & Revenue-at-Risk Analytics
Tech Stack: Excel, SQL, Power BI

- Analyzed 5 related tables covering ~500 B2B SaaS accounts, 25,000+ usage records, and 5,000+ subscriptions to identify churn drivers and revenue at risk.
- Built a deduplicated current-subscription table in Power Query, preventing MRR overstatement caused by ~10 historical subscription records per account.
- Developed 20+ SQL queries using JOINs, CTEs, and CASE-based segmentation across churn, revenue risk, product usage, support, and customer lifecycle analysis.
- Built a 4-page Power BI dashboard revealing 22% overall churn, with churn ranging from 31% in DevTools to 16% in Cybersecurity, while Cybersecurity showed the highest revenue at risk of $279K.

CERTIFICATIONS

Microsoft Certified: Fabric Analytics Engineer Associate (DP-600)	**Microsoft**
SQL and Relational Databases 101	**IBM**
Python 3.x Programming	**Skill Rack**
Mastering Power BI: Data Analysis and Dashboard Creation	**MSDE Skill India**
The Data Analyst Course: Complete Data Analyst Bootcamp	**Udemy**
Introduction to Data Science	**Cisco Networking Academy**
Data Analytics Essentials	**Cisco Networking Academy**
Data Analytics Job Simulation	**Deloitte**
Introduction to Industry 4.0 and Industrial Internet of Things	**NPTEL**
Automation in Production Systems and Management	**NPTEL**

LEADERSHIP & ACHIEVEMENTS

- Received the Department's Highest CGPA Award for the sixth semester, with an official certificate of recognition.
- Led two robotics projects, a Mobile Pick-and-Place Robot and Swarm Robot Patrolling, resulting in 1 journal paper (IJIRT, May 2025) and 1 international conference presentation (ICOTL 2026).
- Built ML projects including Wheat Plant Disease Classification and an Elephant Detection system for Smart India Hackathon (SIH).
- Solved coding and SQL problems regularly on LeetCode and HackerRank to sharpen problem-solving.
